

Nicole Leidenfrost: Picture "Colorful game with flowers" (2023)

This colorful floral motif is a tribute to the playful and vibrant art of Henry Matisse. The flowers are depicted in vibrant yet carefully chosen colors that convey an atmosphere of joy and optimism - a characteristic feature of Matisse's style. The petals literally dance on the canvas as if they were a musical composition of their own. The brushstrokes are sweeping and full of energy, similar to Matisse's own artistic dance between shapes and colors. The composition radiates a harmonious lightness that transports the viewer into a world full of beauty and joie de vivre. The grace and simplicity of the floral motif, coupled with the artistic sophistication, are reminiscent of Matisse's creative boldness and his ability to play with colors and shapes. Material: acrylic, guache, oil/pastel chalk
